

# L2E PROMAX BLEACH LAUNDRY DESTAINER POWDER

## HI POWER BLEACH LAUNDRY POWDER

- Safe fast and effective action at lower temperatures.
- Slow release concentrated powder bleach for use with all fabrics.
- Safer powder alternative to sodium hypochlorite liquid bleach.
- Higher concentration for more effective and faster action at low temps.
- Excellent stain removal, can only be used with all white cotton/linen fabric

### PRODUCT DESCRIPTION

A sophisticated bleaching powder based on the isocyanurate compounds.

### PRODUCT FEATURES

- A very convenient alternative, in powder form, to sodium hypochlorite bleach and has a much longer shelf life (up to six months in cool, dry conditions).
- Like sodium hypochlorite solution, it is an oxidising agent capable of removing or de-colourising staining matter not removed by the detergency process.
- Retains all the advantages of a chlorine-based bleach but can be safely added during the hot stage of the wash. This eliminates the risk of too quick a temperature rise if sodium hypochlorite is added at the start of a wash, and eliminates the need for additional rinsing when sodium hypochlorite is used on the first rinse.
- L2E PRO MAX is also an alternative to liquid hydrogen peroxide or the peroxy powder bleaches. Our technical field staff will be pleased to advise on individual requirements and to give assistance in determining the appropriate oxidising agent for your rinse.

### DIRECTION FOR USE

- Apply as a dry feed direct to the washing machine. It is not suitable for making up into stock solutions. Please note handling advice given below.
- Rates of addition will vary according to the amount of oxidisable matter present and between 100g and 500g per 45kg dry weight of work will be required.
- L2E PRO MAX should be added direct to the washing machine during the hottest wash stage and temperatures in the range of 71°C - 74°C (160°F - 165°F) should be maintained for at least 10 minutes to allow for the controlled release of the oxidising power of the product.
- Safe to use on virtually all classifications capable of being washed at high temperature but it should not be used on delicate fabrics, dark colours or woollens.
- It should not be mixed with other oxidising agents or acids.

### STORAGE

- Store in cool conditions away from direct sources of heat
- Avoid extremes of temperature
- Do not allow to freeze
- Keep out of reach of children

### SHELF LIFE

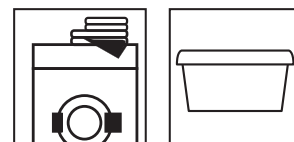

- Shelf life 24 months, if stored as recommended
- Use within 6 months of opening

### ENVIRONMENTAL

- Do not allow large quantities of neat product to enter surface waterways.
- None of the components of this product are animal derived.
